Safety Precaution

WARNING

Service should not be attempted by anyone unfamiliar with the necessary precautions on this player. The following precautions are necessary during servicing.

1. Many electrical and mechanical parts in this player have special characteristics often pass unnoticed and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts that have these special safety characteristics are identified in this manual and its supplements : electrical components having such features are identified by a Δ in the schematic diagram and the parts list. Before replacing any of these components, read the parts list in this manual carefully. The use of substitute replacement parts that do not have the same safety characteristics as specified in the parts list may create shock, fire or other hazards.
2. Before returning the set to the customer, always perform an AC leakage current check on the exposed metallic parts of the cabinet, such as

terminals, screwheads, metal overlays, etc. to be sure the set is safe to operate without danger of electrical shock. Plug the AC line cord directly into a 120V AC outlet(120V Version only).(Do not use a line isolation transformer during this check.) Use an AC voltmeter having 5000Ω per volt or more sensitivity in the following manner : Connect a 1500Ω 10watt resistor paralleled by a $0.15\mu F$ 150V AC capacitor, between a known good earth ground(water pipe, conduct, etc.)and the exposed metallic parts, one at a time. Measure the AC voltage across the combination of 1500Ω resistor and $0.15\mu F$ capacitor. Reverse the AC plug at the AC outlet and repeat AC voltage measurements for each exposed metallic part. Voltage measured must not exceed 0.3 volts RMS. This corresponds to 0.2mA AC. Any value exceeding this limit constitutes a potential shock hazard and must be corrected immediately.

Specifications

USA/Canadian version

Power output / ch.

Minimum continuous average both channels driven with no more than 0.3% THD.

at 8 ohms 1kHz	85W
at 8 ohms 20Hz to 20kHz	80W

Intermodulation Distortion, 60Hz:7kHz=4:1 SMPTE

50W for AI2110R(100W for AI2115R), output into 8 ohms	0.05%

Weight(net)	8.6kg(17 lbs, 9.6oz)

Note :Specifications and design subject to change without notice for improvements. Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on the European standard, and provides information on regional circuit modification through use of alternate schematic or wiring diagram,and information on regional component variations through use of parts list.

WARNING: CHEMICAL CONTENT NOTICE!

The solder used in the production of this product contains LEAD. In addition, other electrical/electronic and/or plastic (where applicable) components may also contain traces of chemicals found by the California Health and Welfare Agency (and possibly other entities) to cause cancer and/or birth defects or other reproductive harm.

DO NOT PLACE SOLDER, ELECTRICAL/ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHATSOEVER!

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

SPECIFICATIONS

Output Level/Impedance	1.5V/560Ω
Input Sensitivity/Impedance	1.5V/20kΩ
Frequency Response	20Hz—20kHz
Total Harmonic Distortion (20Hz—20kHz)	
Output Level 1.5V,	
20kHz LOW PASS FILTER	Less than 0.03%
Signal-to-Noise Ratio (IHF-A Network)	More than 90dB
Equalizer Band	9-band
Center Frequency	63, 125, 250, 500, 1k, 2k, 4k, 8k, 16kHz
Boost/Attenuation	±12dB (2dB per a step)
Subwoofer Frequency	
(THROUGH, 130Hz, 80Hz)	-6dB/oct.
Audio Muting	-20dB
DSP Preset Programs	8 (HALL, CHAMBER CHURCH, STADIUM, JAZZ CLUB, ROCK CON, DISCO, THEATER)
DSP User Programmable Areas	8
EQ Preset Programs	4
	(POPS, VOCAL, CLASSIC, FLAT)
EQ User Programmable Areas	4
Power Supply	14.4V
Power Consumption	800mA
	(Less than 1mA for memory back up)
Dimensions (W x H x D)	
Main Unit	215 x 52.5 x 162mm (8-7/16" x 2-1/16" x 6-5/16")
Commander Unit	172 x 25 x 49mm (6-3/4" x 1-1/16" x 1-15/16")
Weight	
Main Unit	1.5kg (3lbs. 5oz.)
Commander Unit	0.2kg (7oz.)
Accessories	Commander unit 4.5m extension cable Power cords Frame Mounting hardware Magic fastener x2 5 x 6 tapping hex screw with washer x4 M2 x 5 screw x4 M5 x 8 flat head screw x4 M5 x 8 hex screw with washer x4

INTERNAL VIEW

- ① IC308, 309 : LC7535 (Electric Controlled Volume)
- ② MAIN CIRCUIT BOARD
- ③ IC34, 38 : PCM61P (DAC)
- ④ DSP CIRCUIT BOARD
- ⑤ IC312 : HD63B01Y0XXXXP (8 bit μ -COM)
- ⑥ I/O CIRCUIT BOARD
- ⑦ IC11 : YM3422 (Digital Signal Format Converter)
- ⑧ IC10, 13 : TC51832FL-10 (RAM)
- ⑨ IC9, 12 : YM3413 (LDSP)
- ⑩ IC14, 15 : YM3433 (Digital Filter)
- ⑪ IC5 : AK5339-VP (A/D Converter)
- ⑫ IC6, 7 : YM6104 (Digital Equalizer)
- ⑬ IC24 : YM3436 (Digital Format Interface Receiver)

DISASSEMBLY PROCEDURES

(Remove parts in the order as numbered.)

1. Removal of Top Cover Ass'y
 - a. Remove 4 screws (①) in Fig. 1.
2. Removal of Shield Plate (B)
 - a. Removal 5 screws (②, ③) in Fig. 1.

Fig. 1

3. Removal of Main Circuit Board
 - a. Remove 7 screws (④) in Fig. 2 and then remove the Sub Panel (R).
 - b. Remove 4 screws (⑤) in Fig. 2 and then remove the Main Circuit Board.
- * Remove 3 connectors (#1, #4, #5) from DSP Circuit Board.

Fig. 2

CHIP DEVICE DESCRIPTIONS

CAUTION : AFTER REMOVING CHIP DEVICES, DONOT REUSE THEM.

1. KINDS OF CHIP DEVICES

There are five kinds of chip devices :

- a. Thick film chip resistors
- b. Multi-layer ceramic chip capacitors
- c. Mini-mould (Chip) transistors
- d. Mini-mould (Chip) diodes
- e. Mini-mould (Chip) ICs

2. IDENTIFICATION OF CHIP DEVICES

The first four kinds of chip devices have similar shape and size, and it is quite difficult to identify them at a glance, but basically, the following identification is available:

a. Resistors and Jumper Resistors

The resistance of each chip resistor is indicated by a color code consisting of three color bands.

Color codes

Color	1st color band	2nd color band	3rd color band
	Nominal resistance (Unit : Ω)		
	1st number in code	2nd number in code	Multiplier
Black	0	0	10 ⁰
Brown	1	1	10 ¹
Red	2	2	10 ²
Orange	3	3	10 ³
Yellow	4	4	10 ⁴
Green	5	5	10 ⁵
Blue	6	6	
Purple	7	7	
Gray	8	8	
White	9	9	
Gold			10 ⁻¹

b. Ceramic Capacitors

A color code is used to indicate the capacitance of capacitors less than 1000pF.

Color codes

Color	1st color band	2nd color band	3rd color band
	Nominal capacitance (Unit : pF)		
	1st number in code	2nd number in code	Multiplier
Black	0	0	10 ⁰
Brown	1	1	10 ¹
Red	2	2	10 ²

Capacitors exceeding 1000pF in capacitance have a 2 character indication of the capacitance value. For example, "A3" stands for 1000pF.

Example :

● Indication Code Definitions

Alphabet The numerical value of the electrostatic capacity.
 Number The value of the multiplier.
 Special mark Temperature characteristic.

● Electrostatic capacity

<Alphabet>

Alphabet	A	B	C	D	E	F	G	H	J	K	L	M
Numerical value	1.0	1.1	1.2	1.3	1.5	1.6	1.8	2.0	2.2	2.4	2.7	3.0

Alphabet	N	P	Q	R	S	T	U	V	W	X	Y	Z
Numerical value	3.3	3.6	3.9	4.3	4.7	5.1	5.6	6.2	6.8	7.5	8.2	9.1

Alphabet	a	b	d	e	f	m	n	t	y
Numerical value	2.5	3.5	4.0	4.5	5.0	6.6	7.6	8.0	9.0

<Number>

Number	0	1	2	3	4	5	6	7	8	9
Multiplier	10 ⁰	10 ¹	10 ²	10 ³	10 ⁴	10 ⁵	10 ⁶	10 ⁷	10 ⁸	10 ⁻¹

c. Transistors

Transistor can be identified by a character code consisting of any combination of letters and numbers. Given below is a cross-reference table of identification codes : use it to identify each device.

Indication	Part No.	Description	HFE rank
BQ	IC241200	Transistor 2SC2412	Q-rank
BR	IC241200	Transistor 2SC2412	R-rank
BS	IC241200	Transistor 2SC2412	S-rank
CCB	VG730700	Transistor 2SC3326	B-rank
14	VB503600	Digital Transistor DTA114EK	
24	VB504700	Digital Transistor DTC114EK	
A3	VK625100	Diode Array	

d. Diodes and Zener Diodes

Each diode has a yellow or white band (cathode band) on its cathode side as shown below:

The zener diode has three color bands as shown below:

The 1st and 2nd color bands indicate the model as a number assigned to each color as listed in Table 1. Referring to Table 1, read the code number by converting the colors of the bands into the corresponding numbers and then find the model code in Table 2.

The number in the model code indicates the zener voltage. The 3rd color band on the zener diode indicates the subdivision of the zener voltage.

COLOR	1st color band 1st number in code	2nd color band 2nd number in code	3rd color band Zener voltage Subdivision
Black	0	0	—
Brown	1	1	—
Red	2	2	—
Orange	3	3	—
Yellow	4	4	A
Green	5	5	B
Blue	6	6	C
Purple	7	7	—
Gray	8	8	—
White	9	9	D

Table 1

RLZ Series Zener Code No. and Model Code Cross-reference Table.

Zener Code No.	Model Code	Zener Code No.	Model Code	Zener Code No.	Model Code
07	RLZ3.6	16	RLZ8.2	25	RLZ20
08	RLZ3.9	17	RLZ9.1	26	RLZ22
09	RLZ4.3	18	RLZ10	27	RLZ24
10	RLZ4.7	19	RLZ11	28	RLZ27
11	RLZ5.1	20	RLZ12	29	RLZ30
12	RLZ5.6	21	RLZ13	30	RLZ33
13	RLZ6.2	22	RLZ15	31	RLZ36
14	RLZ6.8	23	RLZ16	32	RLZ39
15	RLZ7.5	24	RLZ18		

Table 2

As explained above, you can identify chip devices tentatively, but actual identification should be made by referring to the parts layout drawing in the service manual.

3. SPECIAL NOTICE FOR HANDLING CHIP DEVICES

Chip devices are not heatproof or shockproof. Use caution when handling them.

a. For shock prevention

Chip devices are made of ceramic moulding, please do not subject them to direct shock.

- Set the chip device flat onto the printed circuit board.
- Do not apply unnecessary stress to the chip device. When soldering two terminals of the chip device, soldering is done one terminal at a time. Sometimes, when one terminal is soldered, the other unsoldered terminal will lift slightly. In these cases, do not try to push down the lifted terminal using the tip of the soldering iron; you may crack the chip device or break the terminals.

b. For heat prevention

Do not apply high temperature to chip devices for long periods. Soldering should be done quickly.

c. Soldering

- Chip devices can not withstand rapid heating or cooling. Do not heat the chip itself; heat the terminals of chip devices only.
- Solder quickly, excessive soldering time will cause damage to chip devices.
- Try to reduce amount of solder when soldering. The amount of solder will effect the extent of chip bending against the printed circuit board. Refer to the proper amount of solder as shown below.

Fig. 5

d. Soldering iron

When soldering chip devices, use the correct soldering iron.

- Soldering iron
The power of the soldering iron should be less than 30 watts. The diameter of the iron should be about 2 mm.
- Temperature of iron tip.
The temperature of the soldering iron tip should be less than 536°F. (280°C)

e. Mounting chip device onto printed circuit board

- Set chip devices as close as possible to the surface of the printed circuit board.

Do not apply unnecessary pressure to chip devices to try to make it close to the surface of printed circuit board.

Try to keep the distance between the chip device and the surface of the printed circuit board less than 0.5mm.

- Do not connect (solder) wire or terminals of other parts to a terminal of a chip device.
- Do not mount chip devices incorrectly, such as in (b), (c) and (d), below.

Fig. 6

f. Removal of defective device for repair

When removing chip devices with a fork tipped iron, heat the chip device with the fork tip and slide the chip device off.

When you are going to remove the chip devices using a regular tipped iron, alternately heat the two terminals of the chip device about 2 or 3 times and slide the chip device off. Slide chip device only in the direction shown below.

Fig. 7

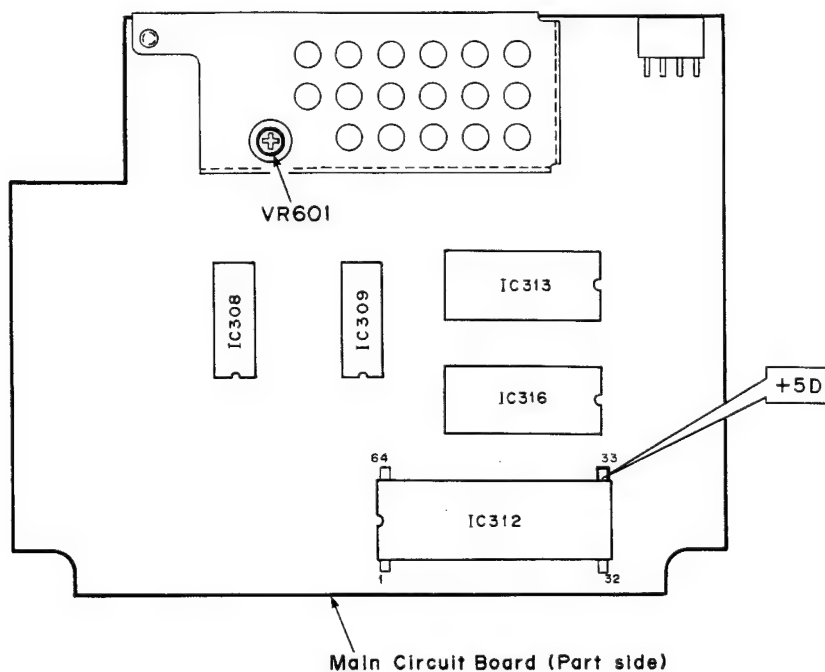

■ ADJUSTMENTS

Voltage adjustment

- Use to make connection between the Main Circuit Board and the DSP Circuit Board.
5P Extention cord (P/No. VB711700)
8P Extention cord (P/No. VB717100)
- Set DC power supply voltage to 14.4V, with no load or signal applied.

- Measure the voltage at the test point **+5D** and adjust the VR601 so that the following rating will be satisfied.

$$V_{5D} = 5 \pm \begin{matrix} 0.2 \\ 0.1 \end{matrix} \text{ V (DC)}$$

- e. Mounting chip device onto printed circuit board**
- Set chip devices as close as possible to the surface of the printed circuit board.
 - Do not apply unnecessary pressure to chip devices to try to make it close to the surface of printed circuit board.
 - Try to keep the distance between the chip device and the surface of the printed circuit board less than 0.5mm.
 - Do not connect (solder) wire or terminals of other parts to a terminal of a chip device.
 - Do not mount chip devices incorrectly, such as in (b), (c) and (d), below.

Fig. 6

f. Removal of defective device for repair

When removing chip devices with a fork tipped iron, heat the chip device with the fork tip and slide the chip device off.

When you are going to remove the chip devices using a regular tipped iron, alternately heat the two terminals of the chip device about 2 or 3 times and slide the chip device off. Slide chip device only in the direction shown below.

Fig. 7

■ ADJUSTMENTS

Voltage adjustment

- Use to make connection between the Main Circuit Board and the DSP Circuit Board.
- 5P Extension cord (P/No. VB711700)
- 8P Extension cord (P/No. VB717100)
- Set DC power supply voltage to 14.4V, with no load or signal applied.

- Measure the voltage at the test point **+5D** and adjust the VR601 so that the following rating will be satisfied.

$$V_{SD} = 5 \pm 0.2 \text{ V (DC)}$$

Main Circuit Board (Port side)

1. S-RAM Check

When turning ON the power of this unit for the first time, S-RAM check should be done at the same time according to the procedure described below.

- Turn ON the power.
Confirm that "HELP!" appears on display.
- Turn OFF the power.
- Turn ON the power.
Confirm that the mode is set to HALL.

If "HELP!" appears in above Step ③, an abnormality exists in either the S-RAM itself or its peripheral.

When the S-RAM check results (Steps ① to ③) are satisfactory, proceed to the test program described.

- Proceeding to the test program while "HELP!" is on display will result in the "ERROR" display. When the key operation is not accepted, the communication condition between the main unit and the commander is poor.

2. Test Program

1. Starting

Turn ON the power, press the "memo" key and within 5 seconds, press the "AUDIO" key. Then pressing the "reset" key within 10 seconds will start the program.

2. Error check

The test program executes the error check and displays the error, if any, by using the following error messages.

Error message	Check Content
ERROR 1	ROM error
ERROR 2	CPU internal RAM error
ERROR 3	External RAM error
ERROR 4	Back-up error
ERROR 5	DEQ, DSP transfer error

3. Test Mode Menu

The test mode has following menu items.

- LCD check
- RAM through
- DSP through
- EQ check
- VOL UP/DOWN
- MUTE ON/OFF

The initial conditions are as follows.

- LCD display : RAM
- LED : Green
- Signal : RAM through
- EQ : Flat
- VOL : Max.
- MUTE : OFF
- BAL/FAD : Center position

(1) LCD check

With the test program started, pressing the "POSITION" key will cause all LCDs to light.

(2) Signal check

0dB should be obtained at every channel under the following conditions.

EQ : Flat
BAL/FAD : Center position
VOL : 0

1) RAM through

When the test program is started, "RAM" appears on display and the signal is obtained in the RAM through state. After that, the signal state is switched between DSP through and RAM through at every pressing of the "DSP ON" key. In the RAM through state, about 186ms delay occurs.

2) DSP through

When the "DSP ON" key is pressed in the RAM through state, "DSP" appears on display and the signal state becomes the DSP through state. After that, the signal state is switched between DSP through and RAM through at every pressing of the "DSP ON" key.

(3) EQ check

Pressing the "EQ (ON/OFF)" key sets to DSP through state and 1kHz EQ measurement mode. When the parameter "+" key is pressed, the frequency gain which is flashing then increases by 12dB and when the "-" key is pressed it decreases by 12dB, resulting in 0dB. Pressing the "-" key again will result in -12dB. When the "P.SEL" key is pressed, the frequency shifts to the right by one and at the same time all bands become flat.

(4) VOL UP/DOWN

The volume is at maximum(0) when the test program is started. It varies as the "Δ" "▽" key is used.

(5) MUTE ON/OFF

Pressing the "MUTE" key will result in 20dB decrease. The MUTE display flashes during MUTE ON.

4. Terminating Test Program

Be sure to press the "RESET" key at the end of the test program.

• SW1

This unit has a SW1 for the servicing purpose.

Sliding it to the opposite side of the IC11 allows the output to come through the DSP and DEQ circuits. This facilitates determination whether a failure exists in the DSP and DEQ circuits (including ICs) or elsewhere. Be sure to slide it back to the IC11 side after completion of the repair work.

YDSP-1

IC6, 7 : YM6104
Digital Equalizer

Pin No.	Pin Name	I/O	Function
1	VDD	I	+5V power supply
2	XMD	I	Switches CDI input to either synchronous mode (1 : 1) "L" or asynchronous mode (Start-stop synchronous system 16 : 1) "H"
3	CRS	I	Initializes SCI interface
4	CDI	I	SCI input for setting micro program, factor and control register
5	CDO	O	SCI output for setting micro program, factor and control register
6	XCLK	I	Input-output clock for CDI and CDO
7	TRG	I	Determines parameter transfer timing from transfer buffer to factor RAM when external trigger is selected
8	ESL	I	Enters output timing into SO0 and SO1 when EXT clock is selected
9	ELD	I	Enters input timing into SI0 and SI1 when EXT clock is selected
10	ECLK	I	Enters input-output clock for SI0, SO0 and SO1 when EXT clock is selected
11	CLK	I	Master clock input
12	VSS	I	Ground
13, 14	SI0, SI1	I	16 bits serial input
15, 16	SO0, SO1	O	16 bits serial output
17	OVF	O	Over flow detect
18	TEST	I	Used for testing Usually connected to +5V
19	C2/Sign	O	Outputs bit 2 of factor RAM while delaying it by 1 bit. Used as a timing signal Monitors sign bit of accumulator by setting test Reg (When factor RAM is used as a timing signal, effective bit number of factor decreases)
20	C1/TESTM	O	Outputs bit 1 of factor RAM while delaying it by 1 bit. Used as a timing signal Switches to test output of multiplier by setting test Reg
21	CO	O	Outputs bit 2 of factor RAM while delaying it by 1 bit. Can be used as a timing signal
22	CEMD	I	Turns OFF CE of SCI input CE ON : "H" CE OFF : "L"
23	IC	I	Initializes DEQ operation
24	Sync	I	Synchronous signal of system

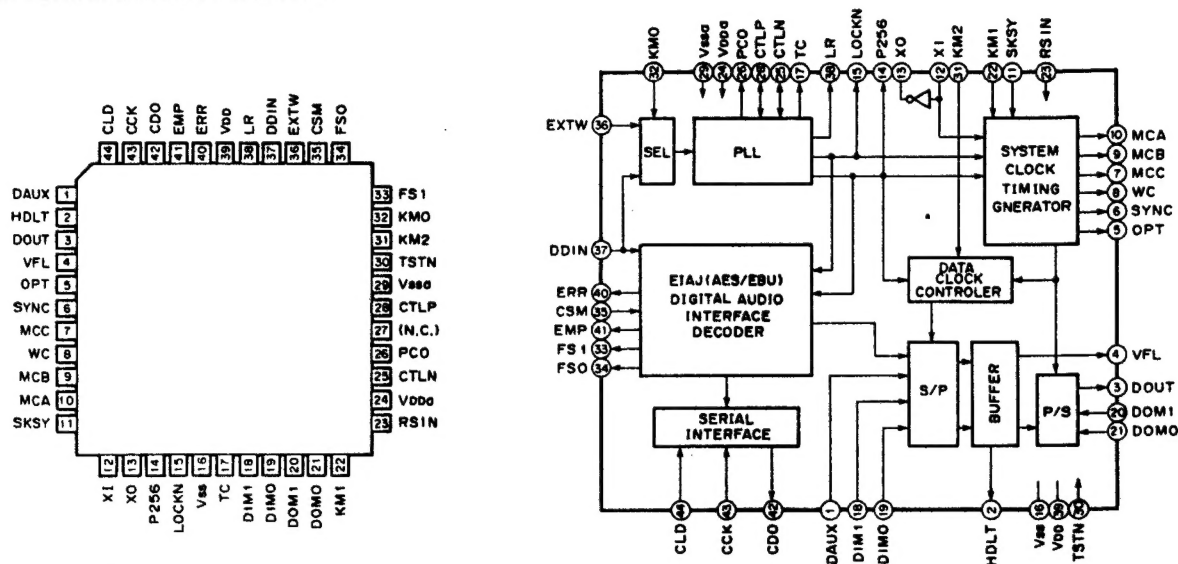

IC9, 12 : YM3413
LDSP

Pin No.	Pin Name	I/O	Function	Pin No.	Pin Name	I/O	Function
1	VDD	—	+5V voltage supply	40	CLK	I	Master clock input
2	D7	I/O	I/O pins connected to memory data bus (8bit)	39	SO1	O	Serial data output
3	D6	I/O		38	CDO	O	CD data output
4	D5	I/O		37	CDI	I	CD data input
5	D4	I/O		36	CRS	I	CD data sync signal input
6	D3	I/O		35	IC	I	LDSP initial clear signal input
7	D2	I/O		34	XCLK	I	ACIA clock input
8	D1	I/O		33	SDO	O	Serial data output
9	D0	I/O		32	A16	O	Outputs connected to memory address bus
10	SI0	I	Serial data input	31	A15	O	
11	SI1	I		30	A14	O	
12	SYW	I	System sync signal input	29	A13	O	
13	WE	O	Read/write signal to memory input	28	A12	O	
14	OE	O	Pin connected to memory OE term	27	A11	O	
15	A0	O	Outputs connected to memory address bus	26	A10	O	
16	A1	O		25	A9	O	
17	A2	O		24	A8	O	
18	A3	O		23	A7	O	
19	A4	O		22	A6	O	
20	VSS	O	GND 0V	21	A5	O	

IC11 : YM3422
Digital Signal Format Converter

Pin No.	Pin Name	I/O	Function
1	VSS	—	GND terminal
2	SI0	IN	Serial data input (ch 0)
3	SO0	OUT	Serial data output (ch 0)
4	BC0	IN	Bit clock input
5	WC0	IN	System synchronized signal input
6	SI2	IN	Serial data input (ch 0)
7	SO2	OUT	Serial data output (ch 0)
8	VDD	—	Voltage supply (+5V)
9	M0	IN	Mode select signal
10	M1	IN	
11	M2	IN	
12	M3	IN	
13	WC1	IN	System synchronized signal input (Word clock)
14	BC1	IN	Bit clock input
15	SC1	IN	Serial data output (ch 1)
16	SI1	OUT	Serial data input (ch 1)
